Bengaluru, India

React.js · Next.js · TypeScript · JavaScript (ES6+) · Python · SQL · REST APIs

Professional Summary

Results-driven Computer Science graduate (2025) with professional experience architecting enterprise-grade web applications, cloud-deployed AI platforms, and full-stack systems. Proficient in React.js, TypeScript, Next.js, Python, SQL, and REST API design — with demonstrated impact across performance optimization (30% rendering improvement, 25% bundle size reduction), API quality (40+ endpoints tested), and workflow automation (70% reduction in manual processing). Passionate about clean, scalable code and delivering production-ready solutions at the intersection of frontend, backend, and AI engineering.

Professional Experience

Frontend Developer — Full-Time · Nextbrain Technologies, Bengaluru

Feb 2026 – Present

- Engineered and optimized production-grade React.js and Next.js components using TypeScript and ES6+, achieving a **30% improvement in rendering performance** through strategic code-splitting, lazy loading, and Context API-based state management.
- Architected and implemented **real-time WebSocket connections** using Socket.IO, enabling bi-directional live communication between clients and server — powering instant data updates across multiple application modules.
- Built an **internal Firebase-powered chat system** with real-time messaging, read receipts, and conversation threading using Firebase Firestore and React — improving internal team communication and eliminating ad-hoc coordination overhead.
- Developed a **live employee location tracking** feature integrating the Geolocation API with real-time WebSocket broadcasting, enabling managers to monitor field employee positions with sub-second update latency on an interactive map UI.
- Reduced application bundle size by **25%** through dynamic imports and tree-shaking optimizations; contributed to Agile/Scrum sprint planning, peer code reviews, and cross-functional feature delivery pipelines.

Frontend Developer — Internship · Nextbrain Technologies, Bengaluru

Oct 2025 – Jan 2026

- Delivered responsive, WCAG-accessible UI layouts using React.js, TypeScript, and Tailwind CSS, adhering to ES6+ best practices and team design-system standards.
- Integrated third-party REST APIs and built reusable UI components consumed across multiple product modules; gained hands-on exposure to production CI/CD workflows and Agile iteration cycles.

Software Engineer Trainee · Invincible IT Services, Bengaluru

Aug 2025 – Sep 2025

- Developed enterprise-grade UI screens using React.js and Kendo UI for data-intensive business applications, applying OOP design principles to ensure modular, maintainable, and scalable business logic.
- Designed and optimized relational SQL database schemas and complex queries for transactional workflows; contributed to C#/.NET backend modules, improving data processing efficiency.
- Designed and executed comprehensive API test suites across **40+ endpoints** using Postman; resolved critical cross-functional defects, improving API response reliability and performance by **20%**.

Key Projects

AI Career Intelligence Platform — Python · Streamlit · Groq AI · Plotly · Pandas · REST APIs 2025 – 2026

- Architected a full-stack AI-powered career platform featuring an ATS Resume Analyzer, Live Job Finder, Cold Email Generator, and an interactive Job Market Dashboard — deployed end-to-end with Python and REST APIs.
- Integrated Groq LLaMA 3.3-70B for real-time resume analysis, skills-gap detection, and personalized email generation across 8 distinct email types; built Plotly dashboards surfacing salary benchmarks and hiring trend analytics.
- Deployed to production on Streamlit Cloud with a GitHub Actions CI/CD pipeline; live at ai-career-platform.streamlit.app.

AI Recruiter Voice Agent — Next.js · React · TypeScript · Vapi · Supabase (PostgreSQL)

2024 – 2025

- Built a real-time AI voice recruiting agent using TypeScript, Next.js, and the Vapi Voice API, backed by Supabase (PostgreSQL) — complete with role-based access control and full-stack authentication flows.
- Engineered automated scheduling workflows and real-time data subscriptions leveraging ES6+ async/await patterns, **improving recruiter operational efficiency by 40%** and reducing manual coordination overhead.

- Engineered a full-featured real-time workforce platform at Nextbrain Technologies, integrating WebSocket-based live communication, internal chat, and GPS-powered employee tracking into a unified React/Next.js application.
- Implemented **Socket.IO bi-directional event handling** for live notifications and instant data sync across connected clients, eliminating the need for polling and reducing server load significantly.
- Built a **Firebase Firestore chat module** with real-time listeners, message threading, and read-state tracking — enabling seamless internal communication between office and field teams within the platform.
- Developed an **interactive live tracking dashboard** using the Geolocation API and WebSocket broadcasting, rendering employee positions on a dynamic map UI with sub-second refresh rates for operations managers.

Technical Skills

Frontend:	React.js, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Kendo UI
Real-Time:	Socket.IO, WebSockets, Firebase Firestore, Firebase Auth, Geolocation API
Backend:	Node.js, C#/.NET, Django, PHP, REST API Design, Express.js
Databases:	MySQL, PostgreSQL, Supabase, SQL Server, Relational Schema Design
AI & Data:	Groq AI, LLaMA 3.3-70B, OpenAI API, Streamlit, Plotly, Pandas, Prompt Engineering
Cloud & DevOps:	Vercel, Streamlit Cloud, GitHub Actions CI/CD, Docker (fundamentals), Git
Performance:	Code Splitting, Lazy Loading, Tree Shaking, Bundle Optimization, Responsive Design
Testing & Tools:	Postman, API Test Automation, VS Code, Agile/Scrum, Code Review, REST API Testing

Education

B.E. in Computer Science & Engineering — CGPA: 7.7 / 10 · SJCIT, Bengaluru

2021 – 2025

Certifications

- **Claude Code in Action** — Anthropic Mar 2026
- **AI & Machine Learning Engineer** — Rooman Technologies
- **ReactJS & JavaScript** — Infosys Springboard
- **Python Programming** — Aqmenz Automation
- **Java Programming** — Great Learning

Achievements & Impact

- Achieved **30% rendering performance improvement** in production React/Next.js applications through systematic code-splitting and lazy-loading strategies at Nextbrain Technologies.
- Reduced application **bundle size by 25%** using dynamic imports and tree-shaking, directly improving Core Web Vitals and user experience metrics.
- Designed and executed API test coverage across **40+ endpoints**, resolving cross-functional bugs and improving API performance by **20%** at Invincible IT Services.
- Architected real-time WebSocket infrastructure (Socket.IO) and a Firebase Firestore chat system at Nextbrain Technologies, delivering **sub-second live data sync** and internal communication capabilities across the workforce platform.
- Built and shipped a **production-deployed AI platform** integrating LLM-powered resume analysis, job discovery, and email generation — accessible at [ai-career-platform.streamlit.app](#).
- Improved recruiter workflow efficiency by **40%** via real-time AI voice agent with automated scheduling and Supabase-backed data subscriptions.
